

CATALOG# 80268

TOTAL BILE ACIDS ASSAY KIT (NEW)

Catalog number

Total Bile Acids Assay Kit.....80268

Intended use

A high quality enzymatic assay for the quantification of human total bile acids in serum and plasma.

Test principle

Crystal Chem's Total Bile Acids Assay Kit is based on enzymatic technology that utilizes the unique enzymatic property of 3- α hydroxy-steroid dehydrogenase (3- α HSD). In the presence of NAD, the bile acids are converted into 3-keto steroids and NADH. The NADH formed reacts with nitrotetrazolium blue (NBT) to form a dye. The dye formation is monitored by measuring absorbance at 540nm and is directly proportional to the bile acids concentration in the human samples.

Specifications

Sample Types	Serum and Plasma
Assay Time	15 minutes
Range	0 - 200 μ mol/L
Sample Size	15 μ L
Precision	CV < 15%

Optional Control

Control for Total Bile Acids Assay Kit.....Cat# 80263

Useful for validating the calibration curve when running the assay for the first time or in a novel way.

Highlights

- ✓ Kits use only 15 μ L sample
- ✓ Fast assay time (15 minutes)
- ✓ All liquid reagents
- ✓ Improved procedure for better results

Summary of protocol
